

GYPSUM RECYCLING

PLASTERBOARD RECYCLING BROCHURE

WHAT IS IT?

At Saint-Gobain Gyproc, we believe in the reduction of waste on site. We accomplish this by collaborating closely with you by designing efficient systems and solutions that yield minimal waste. Furthermore, we offer on-site training to prevent any unnecessary waste.

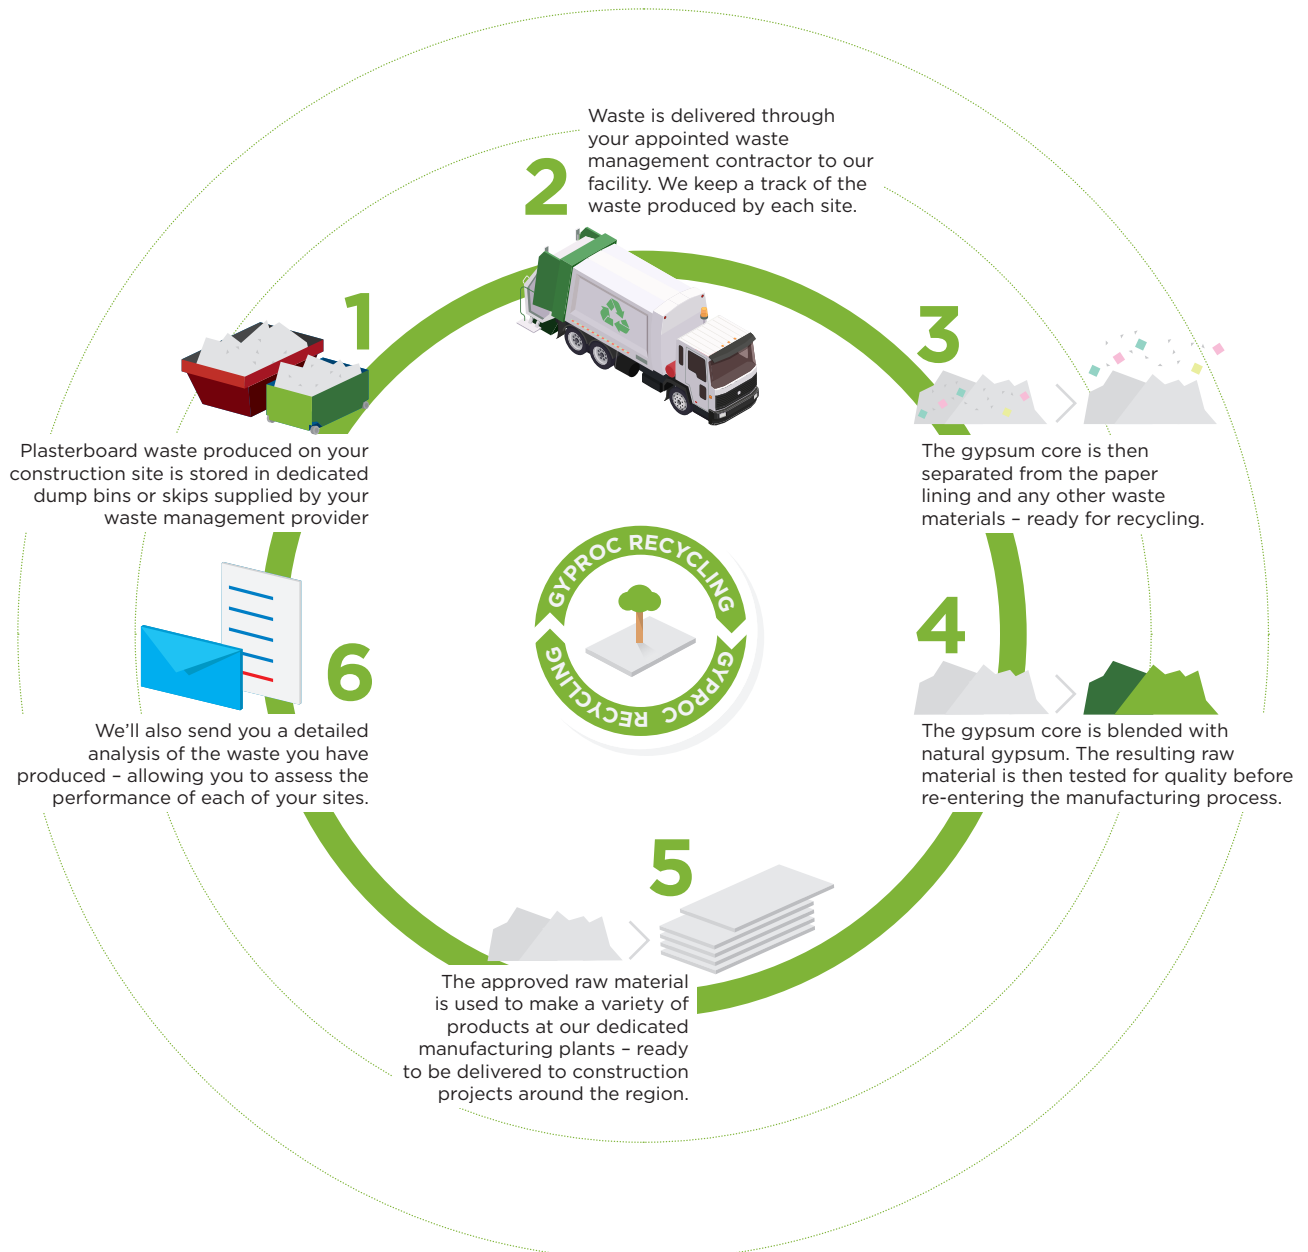

In situations where waste is unavoidable, we at Saint-Gobain Gyproc are here to provide comprehensive support. As the exclusive plasterboard manufacturer in the United Arab Emirates, we hold a permit that authorizes us to receive and recycle plasterboard waste, thanks to our association with Tadweer.

Masdar City, Abu Dhabi - UAE

New York University, Abu Dhabi - UAE

WHAT TO DO?

STEP 1

Appoint waste contractor to transport segregated plasterboard waste.

STEP 2

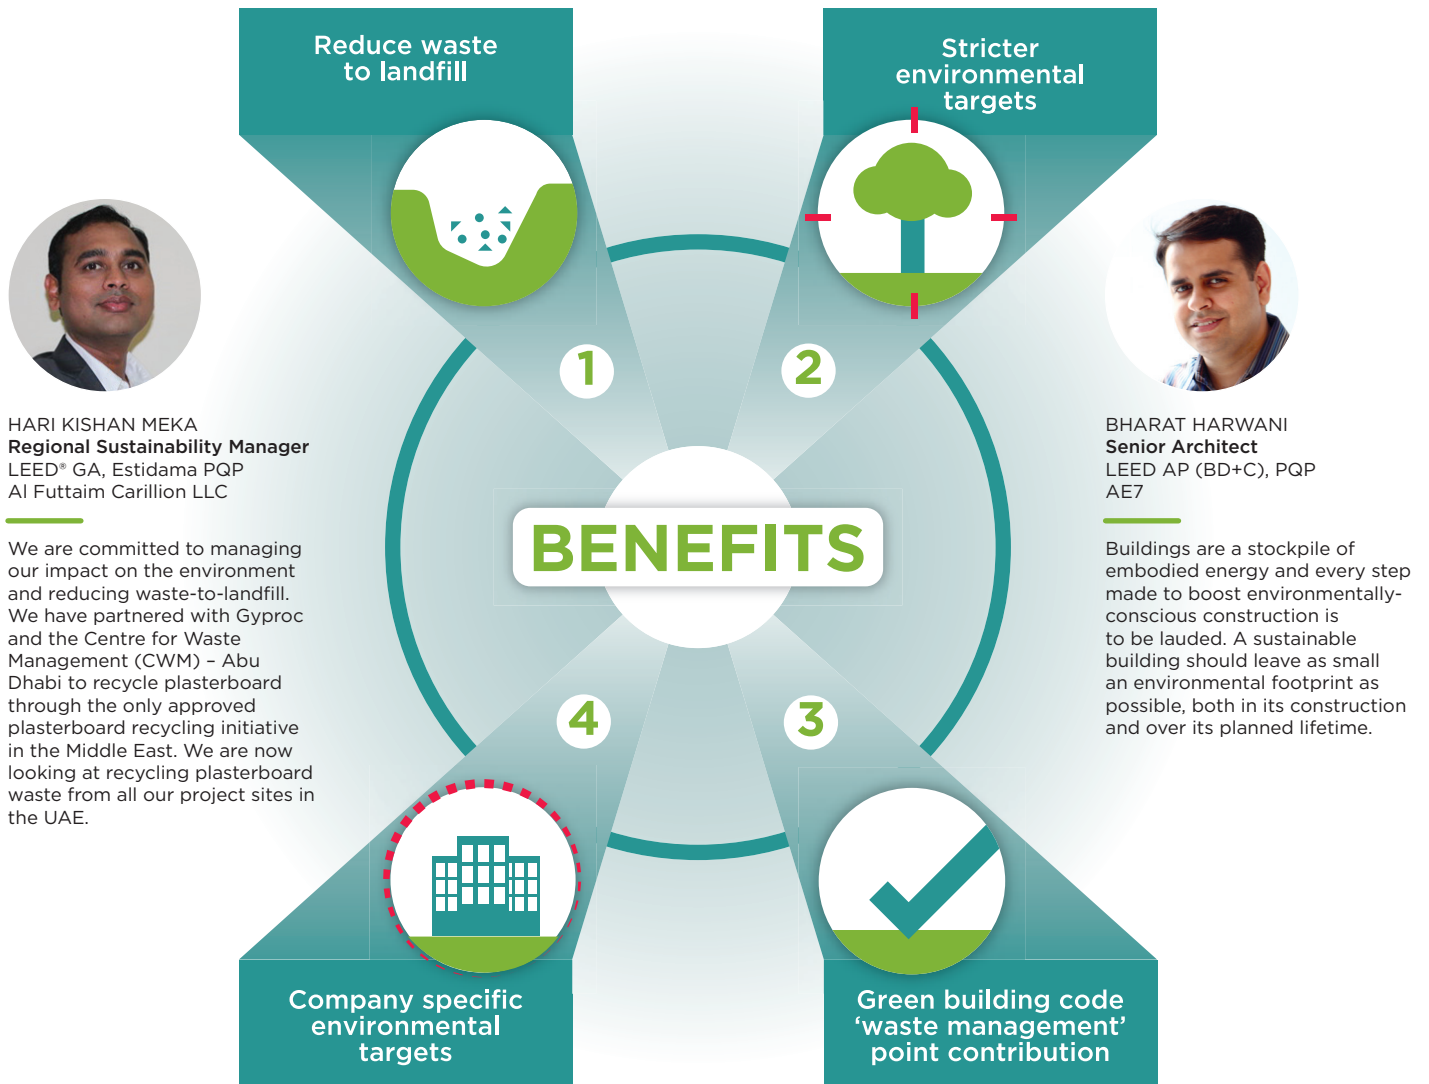

Transporter to deliver segregated, clean waste to our facility in suitable waste skip trucks.

STEP 3

Gyproc will provide regular reports on quality of waste recycled.

WHY?

Every major green building code has a requirement that each project diverts a percentage of construction waste from landfills to recycling initiatives. Points are awarded, measured in either volume or weight, for up to 50% of waste being recycled, with double the points available for up to 75%. By offering a recycling solution, Gyproc now contributes to your achievement of these targets.

For more information on the points available, please check the points calculators for the following local schemes:
